

Tests Description

Test Name	Objective	Steps	Expected Results	Actual results
Sentiment analysis	Check if sentiment analysis works correctly.	<ol style="list-style-type: none"> 1. Ensure that subscribed topic in kafka contains messages with articles 2. Run spark code with sentiment analysis code 	New columns with with averaged sentiment in table is created	<pre> Batch: 3 -----+-----+-----+ window avg_sentiment win_start -----+-----+-----+ {2023-12-18 20:10:00, 2023-12-18 20:15:00} 5.676335010691815E11 2023-12-18 20:10:00 -----+-----+-----+ </pre>
Streaming rates	Check if streaming data from kafka to spark works correctly	<ol style="list-style-type: none"> 1. Ensure that NiFi processors from crypto_rates_api_to_kafka are running 2. Run script test_streaming_rate.py, which is a copy of our solution that prints stream to terminal instead of joining data and dropping 	<p>Within 30 seconds after running the program spark printed table with columns: id, symbol, changePercent24Hr, and priceUSD. This table also can't be empty.</p>	<pre> Batch: 1 -----+-----+-----+-----+-----+ id symbol changePercent24Hr priceUsd current_timestamp window -----+-----+-----+-----+-----+ bitcoin BTC -0.8768706096683539 41806.72134461311 2023-12-18 20:38:23.027 ([2023-12-18 20:35:00, 2023-12-18 20:40:00]) -----+-----+-----+-----+-----+ </pre>

		<p>it to cassandra</p> <p>3. Ensure that within 30 seconds after running the program spark printed table with columns: id, symbol, changePercent24Hr, and priceUSD. Also ensure that this table isn't empty.</p>		
Streaming rates	Check if streaming data from kafka to spark works correctly	<p>1. Ensure that NiFi processors from NewsAPI_news_api_to_kafka are running</p> <p>2. Run script simulate_news.py, which takes newest article from</p>	Within 15 minutes after running the program spark printed non empty table with expected columns	<pre> Batch: 3 -----+-----+-----+ window avg_sentiment win_start -----+-----+-----+ {2023-12-18 20:10:00, 2023-12-18 20:15:00} 5.676335010691815E11 2023-12-18 20:10:00 -----+-----+-----+ </pre>

		<p>kafka topic waits 30 seconds and puts it back simulating data ingestion</p> <p>3. Run script test_streami ng_news.py, which is a copy of our solution that prints stream to terminal instead of joining data and dropping it data to cassandra</p> <p>4. Ensure that within 15 minutes after running the program spark printed table with columns: window, sentiment. Also ensure</p>

		3. Run the script for joining the stream and saving it to kafka topic		
Raw ingestion	Checking if new currency rates are ingested into HDFS using NiFi and if API works correctly	<ol style="list-style-type: none"> 1. Ensure that NiFi process group called crypto_rates_api_to_master is working 2. Edit script test_raw_in_hdfs.py changing the date to current one 3. Run script test_raw_in_hdfs.py it will return the name of the newest file in HDFS. Remember this name 4. Run script again no sooner than 1 minute 	After running program again after at least 1 minute name of newest file will be different	<p>Results after running program once</p> <pre>>>> print(paths[-1:]) ['hdfs://namenode:9000/master_dataset/crypto_rates/2024-01-14/crypto_rates_2024-01-14-13-09-00.avro']</pre> <p>Results after running program one minute later</p> <pre>>>> print(paths[-1:]) ['hdfs://namenode:9000/master_dataset/crypto_rates/2024-01-14/crypto_rates_2024-01-14-13-10-00.avro']</pre>

		later. Check if the name of newest file has changed.
